

## DVWA File Inclusion Module:

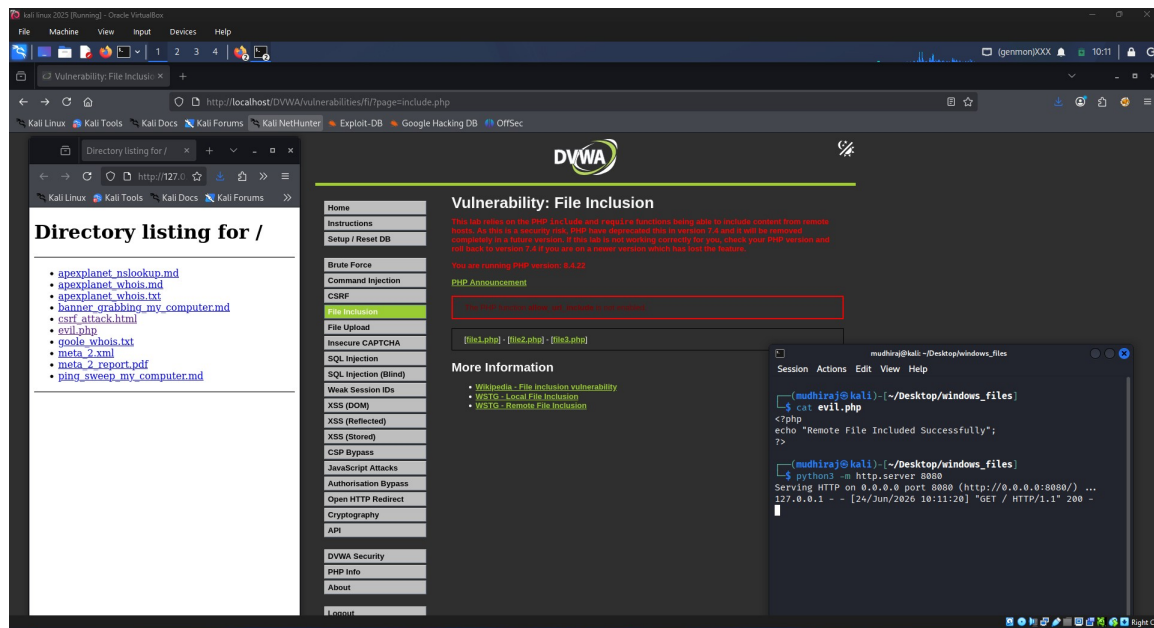

### Local File Inclusion (LFI) Attack:

The URL parameter was manipulated to access the Linux `/etc/passwd` file. This demonstrates how attackers can read sensitive files when user input is not properly validated.

## Remote File Inclusion (RFI) Attempt:

A remote PHP file was hosted locally and an inclusion attempt was performed. DVWA displayed a security restriction because `allow_url_include` is disabled in the current PHP version, preventing remote code execution.
